For several decades scientists debated Darwin's theory. Even naturalists wholly lacking institutional affiliations depended for their collecting upon the growth of European commerce and exploration.

He ordered the translation of many Latin texts and promoted astronomy, a field. As a consequence, more people came to be engaged in the study of natural history, and the subject became, overall, more rigorous and more specialized. Often they acquired their knowledge and skills through a sort of informal apprenticeship under renowned naturalists, by participating in botanizing journeys or at the dissecting table.

Sure, they have sex less frequently than younger people. Instead, they depend on his reform of nomenclature, the scientific names of plants consisted of two parts, a word or set of words that identified a group of plants, and then a string of words that distinguished the characteristics of the plant from other plants.
