You may be able to solve a puzzle using the Xwing technique while someone else solves the same puzzle using another technique. Click here for a printable sheet of three examples. They require "If X and Y then Z" logic, and that is the logic of depth. The logic being, there are only two possibilities in the starting cell, and if both lead to the same result in another, then that other cell has no choice but to be that number. By playing around with all the possible choices for the top row and following this kind of logic, Felgenhauer and Jarvis calculated that there are 2, possible ways to finish the top set of rows with our fixed upper left block. And looking at the bottom middle 3x3 box, we see the three in the bottom row, which is an example:.
