Buildings Every type of material will become eroded sooner or later by the effects of the climate. The available protons will fall to the lowest free energy levels possible, first filling the lowest-energy sink, then the next, and so on until there are no more proton-vacant bases Acid All Fall Down the highest proton-filled acid level.

Unpolluted rain would have a pH value of between 5 and 6. In spite of this limitation, the proton free energy diagram provides a clear picture of the relationships between the various acid base species in a complex solution. Acid rain can be carried great distances in the atmosphere, not just between countries but also from continent to continent.
